# WHO ARE WE ?

## SET-LAS KAUCUK

For us, rubber is more than just a material – it is the foundation of trust, experience, and long-term partnerships. With over 20 years of expertise in the rubber industry, we provide tailored solutions for diverse needs across different sectors. From rubber sheets and seals to gaskets, mats, and custom-molded parts, our focus has always been on delivering not only products but also reliability. We believe that sustainable business relationships can only be built on consistent quality and transparent communication.

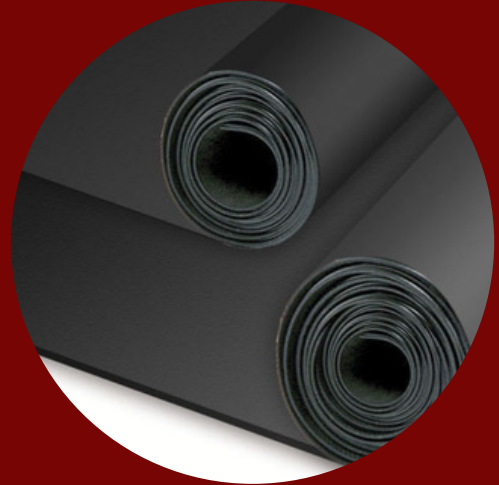

Today, we serve a wide range of industries in Turkey. Tomorrow, our mission is to expand further across international markets, creating value with every shipment. Growth for us means more than increasing production – it is about strengthening trust, expanding our global presence, and sharing our passion for rubber solutions worldwide.

# RUBBER SHEETS

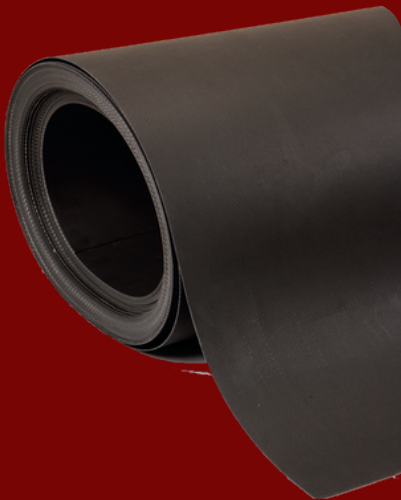

## EPDM

**EPDM rubber sheets are not affected by superheated steam, acetone and alcohol. They can work in some types of acids without deterioration. They can be produced in desired lengths and dimensions.**

## NBR

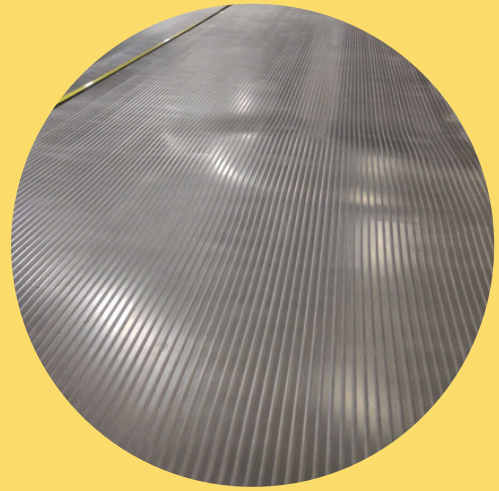

**NBR rubber sheets can be used for a long time without deterioration when in contact with oil. They are widely used in cutting gaskets for such environments. It is possible to manufacture them in wider and longer lengths than standard sizes.**

# RUBBER SHEETS

## ISOLATED SHEET

**Dielectric sheets have a channel on one side, and this channel structure ensures good adhesion to the ground. Rubber insulating mats are long-lasting and are not affected by cold. It is a product that should be used in all areas where there is electric current.**

## LATEX

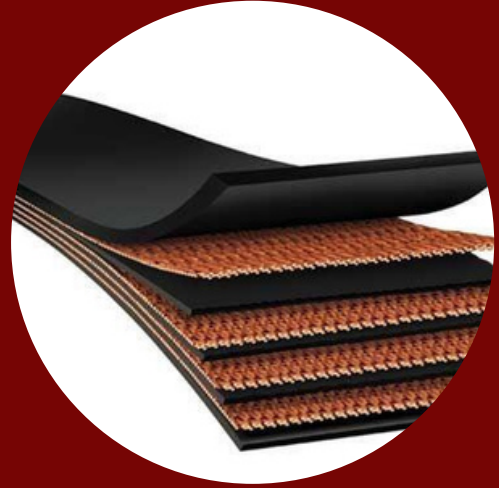

**Latex sheets are among the board types with particularly high physical strength. Their flexible and elastic structure makes them suitable for a wide variety of applications. Furthermore, they can be used comfortably in temperatures ranging from -35 to 70°C. Made of rubber, latex sheets are also resistant to sunlight and moisture. They are highly resistant to UV rays. They are generally used in areas requiring flexibility.**

# RUBBER SHEETS

## CORD FABRIC SHEET

**Cord fabric rubber sheets are among the sheet types with extremely high levels of abrasion and friction resistance. Coder fabrics are used to increase the physical and mechanical resistance of these sheets. This prevents the sheets from being crushed easily under heavy loads and also resists breaking or stretching. These features and advantages make them widely used in many different sectors, including heavy industry.**

## VITON

**Viton sheets are rubber sheets with high resistance to mineral oils and greases. They are most commonly used in oily and high-traffic environments. Furthermore, Viton sheets are highly resistant to chemicals, as well as heat, flame, oxygen, and ozone. They can also be used in temperatures between -10°C and 300°C without deformation or loss of structure.**

# RUBBER SHEETS

## Patterned Sheets

**Patterned panels, with their non-slip properties, are a prominent product in flooring and flooring. Their wear-resistant and durable structure offers a wide range of applications. They also offer alternative solutions in areas requiring sound insulation. Their unique features and advantages make them a preferred choice in a wide variety of applications.**

## SANDBLASTING

**Sandblasting sheets are manufactured using a high-rubber content, making them resistant to abrasion. These features allow them to be used almost anywhere and provide superior sealing. They are also resistant to both abrasion and acidic environments. Their soft and durable structure makes them suitable for use under machinery that generates significant noise and vibration.**

# OUR OTHER PRODUCTS

## Gasket

- Our gaskets provide reliable sealing performance, resistant to high pressure, temperature, and chemical environments. Available in standard sizes and custom dimensions.

## Felt

- Our gaskets provide reliable sealing performance, resistant to high pressure, temperature, and chemical environments. Available in standard sizes and custom dimensions.

## O-Ring

- O-Rings are one of the most preferred sealing elements across industries. We produce them in a wide range of sizes and various rubber materials.

## Molded Products

- We offer molded parts tailored to your specific needs. Our flexible production capacity serves the requirements of diverse industries.

## Rubber Pads / Bumpers

- Used for vibration, impact, and noise control, our rubber pads combine durability, flexibility, and reliability. Standard and custom sizes are available.

## Polyurethane

- Our polyurethane products stand out for their high wear resistance and elasticity, providing long-lasting performance under challenging conditions.

*Let's Build a Partnership  
Together!*

Thank you for taking the time to review our catalog.  
We hope our rubber solutions can add value to your  
business.

Please feel free to contact us for more information,  
samples, or custom solutions.
